

CLASS 6 FRACTIONS

MODULE 2/4 EQUIVALENT FRACTIONS, LIKE FRACTIONS, FRACTIONS IN SIMPLEST FORM

Equivalent Fractions

Equivalent Fractions name the same amount but have different numerators and denominators. They are sometimes called **equal fractions**.

$$\frac{1}{2} = \frac{2}{4}$$

$$\frac{2}{2}$$

=

$$\frac{4}{4}$$

$$\frac{4}{8}$$

=

$$\frac{1}{2}$$

$$\frac{3}{4}$$

=

$$\frac{6}{8}$$

$$\frac{2}{3}$$

=

$$\frac{6}{9}$$

$$\frac{4}{12}$$

=

$$\frac{2}{6}$$

$$\frac{1}{5}$$

=

$$\frac{2}{10}$$

EXAMPLES

1.

$$\frac{1}{3} = \frac{3}{9}$$

2.

$$\frac{1}{4} = \frac{3}{12}$$

3.

$$\frac{2}{3} = \frac{8}{12}$$

4.

$$\frac{3}{4} = \frac{9}{12}$$

5.

$$\frac{1}{2} = \frac{5}{10}$$

$1/2$

$2/4$

$4/8$

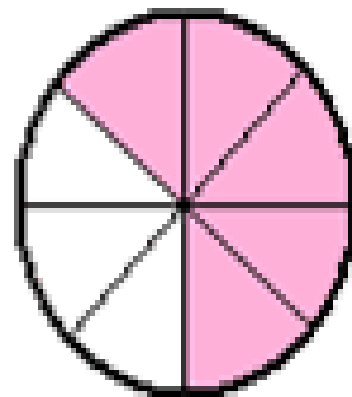

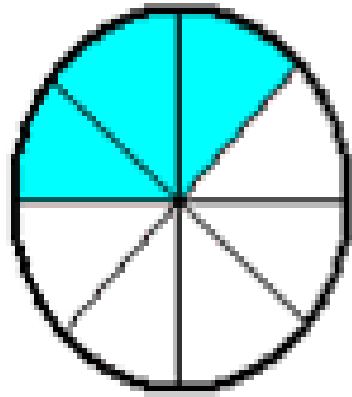

Like Fractions

Fractions with the same
denominator.

$$\frac{1}{4} \rightarrow \begin{array}{|c|c|} \hline \square & \blacksquare \\ \hline \square & \square \\ \hline \end{array} \quad \frac{2}{4} \rightarrow \begin{array}{|c|c|} \hline \square & \blacksquare \\ \hline \square & \blacksquare \\ \hline \end{array}$$

Like Fractions

Example 1:

$$\frac{3}{8}$$

$$\frac{5}{8}$$

like fractions

Example 2: $\frac{2}{13}, \frac{5}{13}, \frac{6}{13}, \frac{8}{13}$ and $\frac{9}{13}$ are like fractions.

CONVERSION OF FRACTIONS INTO ITS LOWEST TERMS

- When both the numerator and denominator have a common divisor, we can **reduce the fraction to its lowest terms.**
- A fraction is said to be in its lowest terms (or reduced) when the numerator and denominator are relatively prime (have no common divisors other than 1).

EXAMPLE

To express $\frac{4}{8}$ in simplest form.

$$\frac{4}{8} = \frac{2}{4} = \frac{1}{2} \text{ simplest form}$$

Red arrows point from the 4 in the first fraction to the 2 in the second, from the 8 to the 4, and from the 1 in the third to the 2. A red arrow also points from the text 'simplest form' to the 1 in the third fraction.

Simplifying Fractions

Steps:

- 1) Find GCF.
- 2) Divide the numerator and denominator by the GCF.

GCF of 12 and 18 = 6

$$\frac{12 \div 6}{18 \div 6} = \frac{2}{3}$$

This is 1!

Simplifying Fractions

- To write a fraction in **simplest form** or **lowest terms** follow these two steps:

1 – Find the Greatest Common Factor (GCF) of the numerator and denominator.

2 – Divide both the numerator and the denominator by the GCF.

Example: $\frac{12}{18}$ $12 - 1, 2, 3, 4, \mathbf{6}, 12$ $\frac{12}{18} \div \frac{6}{6} = \frac{2}{3}$
 $18 - 1, 2, 3, \mathbf{6}, 9, 18$ $18 \div 6 = 3$

THANK YOU
