ATOMIC ENERGY EDUCATION SOCIETY

(An autonomous body under Department of Atomic Energy, Govt. of India)

CLASS: XI
SUBJECT: MATHEMATICS
CHAPTER: PERMUTATIONS
AND COMBINATIONS , MODULE-2

PREPARED BY
SAMA KALYAN BABU, PGT(MATHS)
AECS, MYSORE

In this module we are going to learn about:

- PERMUTATIONS
- Permutation of n different objects
- Factorial notation :
- The number of permutations of n different objects taken r at a time
- The number of permutations of n objects ,where p objects are of the same kind and rest are all different
- The number of permutations of n objects ,where P_1 objects are of one kind , P_2 objects are of the second kind,... ,..... P_k are of k th kind

Lets take an example ,

If all the letters of the word 'ROSE' are to be arranged, then the number of possibilities is $4 \times 3 \times 2 \times 1 = 24$

For the same word 'ROSE' ,if only two letters of it are to be arranged ,then the number of possibilities is $4 \times 3 = 12$

Thus ,

A Permutation is an arrangement in a definite order of a number of objects taken some or all at a time

Permutation of n different objects The number of permutations of n different objects taken r at a time when $0 < r \leq n$ and the objects do not repeat can be obtained by fundamental principle of counting as $n(n-1)(n-2)\dots(n-r+1)$, which is denoted by nP_r

Factorial notation :

The notation $n!$ represents the product of first n natural numbers, i.e., the product

$1 \times 2 \times 3 \times \dots \times (n-1) \times n = n!$ and $0!$ defined as 1 .

The formula for $n_{pr} = \frac{n!}{(n-r)!}$

Examples: (i) $5! = 5 \times 4 \times 3 \times 2 \times 1 = 120$

(ii) $7! = 7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1 = 5040$

(iii) $\frac{12!}{5!} = \frac{12 \cdot 11 \cdot 10 \cdot 9 \cdot 8 \cdot 7 \cdot 6 \cdot 5!}{5!}$
 $= 12 \cdot 11 \cdot 10 \cdot 9 \cdot 8 \cdot 7 \cdot 6 = 3991680$

(An autonomous body under Department of Atomic Energy, Govt. of India)

(iv) $6! - 5! = 600$

(v) If $\frac{1}{8!} + \frac{1}{9!} = \frac{x}{10!}$, find x.

We have $\frac{1}{8!} + \frac{1}{9 \times 8!} = \frac{x}{10 \cdot 9 \cdot 8!}$

Therefore, $1 + \frac{1}{9} = \frac{x}{10 \times 9}$ or $\frac{10}{9} = \frac{x}{10 \times 9}$

So, $x = 100$.

ATOMIC ENERGY EDUCATION SOCIETY

(An autonomous body under Department of Atomic Energy, Govt. of India)

(vi) If $\frac{1}{6!} + \frac{1}{7!} = \frac{x}{8!}$, find x

We have $\frac{1}{6!} + \frac{1}{7 \times 6!} = \frac{x}{8!}$

$$\frac{1}{6!} \left(1 + \frac{1}{7}\right) = \frac{x}{8 \times 7 \times 6!},$$

$$\frac{1}{6!} \times \frac{8}{7} = \frac{x}{8 \times 7 \times 6!}, \text{ Hence } x = 64$$

- Find the number of different four-digit numbers that can be formed with the digits 2,3,4,7 and using each digit only once is ?

The required number of ways = ${}^4P_4 = 4! = 24$

- The number of 3 letter words which can be formed by the letters of the word 'NUMBER' if repetitions are not allowed is ${}^6P_3 = 120$.

- The number of permutations of n different objects taken r at a time ,where repetitions is allowed ,is n^r .
- Examples:
 - The number of 3 letter words which can be formed by the letters of the word 'NUMBER' if repetitions are allowed is 6^3 .

- Find the number of possible outcomes when a coin is tossed 6 times is?

Ans:

When a coin is tossed 6 times ,then the total number of possibilities is $2^6 = 64$

The number of permutations of n objects ,where p objects are of the same kind and rest are all different = $\frac{n!}{p!}$

Examples:

How many words with or with out meaning can be formed from the word 'HELLO'?

Ans: Total number of letters in the word is 5
out of which the letter L repeats twice

Hence total number of words possible is $\frac{5!}{2!} = 60$

The number of permutations of n objects ,where P_1 objects are of one kind , P_2 objects are of the second kind,... ,..... P_k are of k th kind and the rest ,if any ,are of different kind is $\frac{n!}{p_1!p_2!p_3!....p_k!}$

Example :

There are 4 identical apples and 5 identical bananas.

In how many ways can you arrange all of the fruits in a row?

Ans: Total number of fruits is 9 ,out of which 4 of one kind and 5 are of second kind

Hence total number of permutations is $\frac{9!}{4!.5!}$

Practice questions:

1. Find the value of (i) $\frac{11!}{10!}$ (ii) $6P_3 - 5P_2$
2. How many 3-digit numbers can be formed using the digits 1 to 9 if no digit is repeated?
3. Find the number of 4-digit numbers that can be formed using the digits 1, 2, 3, 4, 5 if no digit is repeated. How many of these will be even?

ATOMIC ENERGY EDUCATION SOCIETY
(An autonomous body under Department of Atomic Energy, Govt. of India)

4. Find the number of 5-digit telephone numbers having at least one of the two digits repeated is ?
5. Find the total number of 9-digit numbers which have all different digits?
6. How many words with or without meaning can be formed from the word :
 - (i) NICE
 - (ii) CARAVAN
 - (iii) INTELLIGENT
 - (iv) MATHEMATICS
