

## CLASS - VIII

### CHAPTER – 4

#### Module – 1/2

## PRACTICAL GEOMETRY

### 1. Introduction:

We require three measurements (of sides and angles) to draw a unique triangle.

Since three measurements were enough to draw a triangle, a natural question arises whether four measurements would be sufficient to draw a unique four sided closed figure, namely, a quadrilateral.

No, five measurements can determine a quadrilateral uniquely.

### 2. Constructing a Quadrilateral:

We shall learn how to construct a unique quadrilateral given the following measurements:

- When four sides and one diagonal are given.
- When two diagonals and three sides are given.
- When two adjacent sides and three angles are given.
- When three sides and two included angles are given.
- When other special properties are known.

Let us take up these constructions one-by-one.

#### 2.1 When the lengths of four sides and a diagonal are given

We shall explain this construction through an example.

**Example 1:** Construct a quadrilateral PQRS where  $PQ = 4$  cm,  $QR = 6$  cm,  $RS = 5$  cm,  $PS = 5.5$  cm and  $PR = 7$  cm.

**Step 1** From the rough sketch, it is easy to see that PQR can be constructed using SSS construction condition. Draw PQR.

**Step 2** Now, we have to locate the fourth point S. This 'S' would be on the side opposite to Q with reference to PR. For that, we have two measurements.

S is 5.5 cm away from P. So, with P as centre, draw an arc of radius 5.5 cm. (The point S is somewhere on this arc!).

**Step 3** S is 5 cm away from R. So with R as centre, draw an arc of radius 5 cm (The point S is somewhere on this arc also!) (Fig 4.8).

#### Step 4

S should lie on both the arcs drawn.

So it is the point of intersection of the two arcs. Mark S and complete PQRS.

PQRS is the required quadrilateral.

### EXERCISE 1

1. Construct the following quadrilaterals.

(i) Quadrilateral ABCD.

$$AB = 4.5 \text{ cm}$$

$$BC = 5.5 \text{ cm}$$

$$CD = 4 \text{ cm}$$

$$AD = 6 \text{ cm}$$

$$AC = 7 \text{ cm}$$

(iii) Parallelogram MORE

$$OR = 6 \text{ cm}$$

$$RE = 4.5 \text{ cm}$$

$$EO = 7.5 \text{ cm}$$

(ii) Quadrilateral JUMP

$$JU = 3.5 \text{ cm}$$

$$UM = 4 \text{ cm}$$

$$MP = 5 \text{ cm}$$

$$PJ = 4.5 \text{ cm}$$

$$PU = 6.5 \text{ cm}$$

(iv) Rhombus BEST

$$BE = 4.5 \text{ cm}$$

$$ET = 6 \text{ cm}$$

### 2.2 When two diagonals and three sides are given:

When four sides and a diagonal were given, we first drew a triangle with the available data and then tried to locate the fourth point. The same technique is used here.

**Example 2:** Construct a quadrilateral ABCD, given that  $BC = 4.5 \text{ cm}$ ,  $AD = 5.5 \text{ cm}$ ,  $CD = 5 \text{ cm}$  the diagonal  $AC = 5.5 \text{ cm}$  and diagonal  $BD = 7 \text{ cm}$ .

**Solution:**

Here is the rough sketch of the quadrilateral ABCD.

Studying this sketch, we can easily see

that it is possible to draw ACD first (How?).

**Step 1** Draw  $\triangle ACD$  using SSS

construction (Fig 4.11).

(We now need to find B at a distance

of 4.5 cm from C and 7 cm from D).

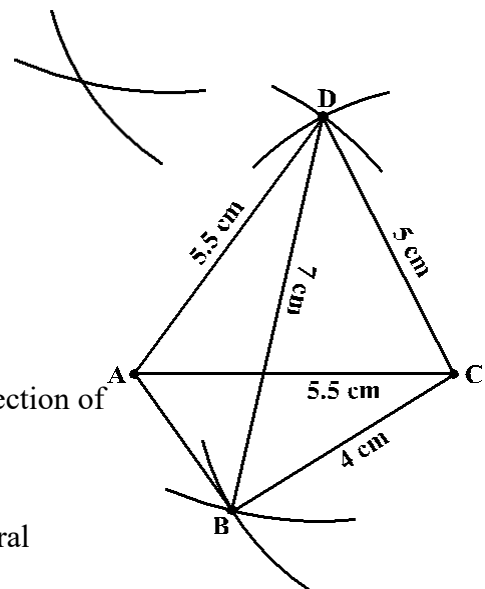

**Step 2** With D as centre, draw an arc of radius 7 cm. (B is somewhere on this arc).

**Step 3** With C as centre, draw an arc of

radius 4.5 cm (B is somewhere on

this arc also).

**Step 4** Since B lies on both the arcs, B is the point intersection of the two arcs. Mark B and complete ABCD.

ABCD is the required quadrilateral

## EXERCISE 2

1. Construct the following quadrilaterals.

(i) quadrilateral LIFT

$$LI = 4 \text{ cm}$$

$$IF = 3 \text{ cm}$$

$$TL = 2.5 \text{ cm}$$

$$LF = 4.5 \text{ cm}$$

$$IT = 4 \text{ cm}$$

(ii) Quadrilateral GOLD

$$OL = 7.5 \text{ cm}$$

$$GL = 6 \text{ cm}$$

$$GD = 6 \text{ cm}$$

$$LD = 5 \text{ cm}$$

$$OD = 10 \text{ cm}$$

(iii) Rhombus BEND

$$BN = 5.6 \text{ cm}$$

$$DE = 6.5 \text{ cm}$$
