

# FRACTIONS

MODULE –  $\frac{3}{4}$  COMPARISON OF FRACTIONS

In Unlike Fractions the denominators  
of the Fractions are different.

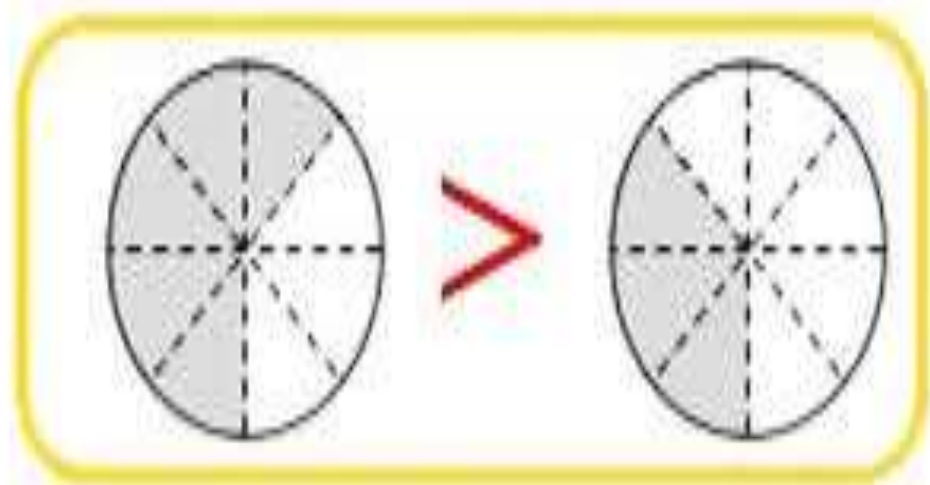

# Unlike Fractions

Fractions with different  
denominators.

# Comparing Fractions With Like Denominators

$$\frac{5}{8} > \frac{3}{8}$$

- Check for matching denominators.
- Compare the numerators.
- Choose the correct symbol.

5  
—  
8

<

7  
—  
8

## Same Denominator

$$\frac{2}{4} < \frac{3}{4}$$

$$\frac{3}{8} < \frac{6}{8}$$

$$\frac{2}{6} < \frac{4}{6}$$

$$\frac{2}{3} > \frac{1}{3}$$

# COMPARING FRACTIONS WITH DIFFERENT DENOMINATORS

- \* The greater fraction will have the larger amount of the whole shaded.

$$\frac{1}{3} > \frac{1}{5}$$

Put these fractions in order of size,  
from smallest to biggest.

$$\frac{2}{5}$$

Smallest

$$\frac{2}{4}$$

$$\frac{2}{3}$$

Biggest

$$\frac{1}{5}$$

Smallest

$$\frac{1}{4}$$

$$\frac{1}{3}$$

Biggest

# STEPS TO COMPARE TWO FRACTIONS

- To compare two fractions,
- Find the **least common denominator (LCD)** of the fractions. That is, find the least common multiple of the denominators.
- Rewrite each fraction as an equivalent fractions using the **LCD**.
- Compare the numerators.

# Compare Fractions

How To:  $\frac{3}{5}$  ?  $\frac{7}{9}$

Step 1: Find a common denominator

$$5 \times 9 = 45$$

Step 2: Make equivalent fractions with the new denominator

$$\frac{3}{5} = \frac{27}{45}$$

$$\frac{7}{9} = \frac{35}{45}$$

Step 3: Compare the numerators

$$27 < 35 \text{ so } \frac{3}{5} < \frac{7}{9}$$

Compare  $\frac{3}{4}$  &  $\frac{2}{3}$

The LCM of 3 and 4 is 12

$$\frac{3 \times 3}{4 \times 3} = \frac{9}{12} \quad \frac{2 \times 4}{3 \times 4} = \frac{8}{12}$$

$$\frac{9}{12} > \frac{8}{12}$$

**EXAMPLE 1****Comparing Fractions Using the LCD**

Compare  $\frac{3}{8}$  and  $\frac{5}{12}$  .

**SOLUTION**

**STEP 1** Find the least common denominator of the fractions. The LCM of 8 and 12 is 24, so the least common denominator is 24.

**STEP 2** Use the least common denominator to write equivalent fractions.

$$\frac{3}{8} = \frac{\cancel{3} \times 3}{8 \times 3} = \frac{9}{24} \qquad \frac{5}{12} = \frac{5 \times \cancel{2}}{12 \times \cancel{2}} = \frac{10}{24}$$

# PROBLEM

▶ Arrange in Ascending order :  $\frac{3}{7}, \frac{4}{5}, \frac{2}{3}$

▶  $\frac{3}{7} \times \frac{15}{15}, \frac{4}{5} \times \frac{21}{21}, \frac{2}{3} \times \frac{35}{35}$

▶  $\frac{45}{105}, \frac{82}{105}, \frac{70}{105}$

▶  $\frac{45}{105}, \frac{70}{105}, \frac{82}{105}$

▶  $\frac{3}{7} < \frac{2}{3} < \frac{4}{5}$

Ex. Rafiq exercised for  $\frac{3}{6}$  of an hour, while Rohit exercised for  $\frac{3}{4}$  of an hour . Who exercised for a longer time?

$$\begin{aligned}\text{Time taken by Rafiq for exercise} &= \frac{3}{6} \text{ of an hour} = \frac{3}{6} \text{ of } 60\text{min} = \frac{3}{6} \times 60 \text{ min} \\ &= 30\text{min}.\end{aligned}$$

$$\begin{aligned}\text{Time taken by Rohit for exercise} &= \frac{3}{4} \text{ of an hour} = \frac{3}{4} \text{ of } 60\text{min} = \frac{3}{4} \times 60\text{min} \\ &= 45\text{min}.\end{aligned}$$

Therefore , Rohit exercised longer time to exercise.

Since  $\frac{3}{6}$  and  $\frac{3}{4}$  are unlike fractions with same numerators , the fraction with the smallest denominator is greater. Therefore Rohit exercised longer time than Rafiq

# PROBLEM

Sara, Reshma, and Krutika had donated  $\frac{2}{3}$ rd,  $\frac{5}{6}$ th and  $\frac{4}{5}$ th of their monthly pocket money to a relief fund which was collected by the school. Find who donated more money to the relief fund?

► Answer : Sara

$$\frac{2}{3}$$

$$\frac{2}{3} \times \frac{10}{10}$$

$$\frac{20}{30}$$

Reshma

$$\frac{5}{6}$$

$$\frac{5}{6} \times \frac{5}{5}$$

$$\frac{25}{30}$$

Krutika

$$\frac{4}{5}$$

$$\frac{4}{5} \times \frac{6}{6}$$

$$\frac{24}{30}$$

Reshma donated more to the relief fund

*THANK YOU*
