CHAPTER- 3 OUR CHANGING EARTH (MODULE-2/3)

WORKSHEET-1.(with answer)

1 The Niagara waterfall is located in _____. (North America)

2. The Victoria Falls is located in _____-(Africa)

3. The floodplains are fertile or. Infertile. (Tick the correct one. Ans .fertile)

4. The longest river in India is _____.(The Ganga).

5. A delta is formed close to the _____.(sea)

6. How is a waterfall formed?

Ans:- When the river tumbles at steep angle over very hard rocks or down a steep valley side, it forms a waterfall..

7. What is Levees?

Ans. The raised banks of the river are called levees>

8. Write three types of landforms.

Ans. Mountain, Plateau and Plains.

9. Why does the river form distributaries as it approaches the sea?

Ans. When the river approaches the sea, the speed of the flowing water decreases and the river begins to break into a number of streams. They are called distributaries. The river becomes so slow that it begins to deposit its load.

10. What do you mean by a river?

Ans. Rivers are powerful and dynamic geological agents. The water flowing through a stream performs three kinds of geologic works as erosion, transportation and deposition. Hence, a river is considered as one of the geological agents on earth.
